Getting started with Next.js

by yimatt.com · 2 min · updated 2026-10-28 · intermediate

What you'll do

In this guide you will set up a clean, reproducible Next.js workflow from the official documentation, verify your local configuration, and run a minimal working check so you can build with confidence.

Prerequisites

- Access to the official documentation at [Next.js \(https://nextjs.org\)](https://nextjs.org).
- A terminal and a modern code editor such as [VS Code](#) or [Neovim](#).
- Basic familiarity with command-line navigation and version control with [Git](#).

Step-by-step setup

1. Verify the official source and release channel. Open [Next.js App Router Documentation](#) and confirm you are reading the current stable release notes rather than outdated third-party blog posts.
2. Initialize a minimal workspace. Create a dedicated directory for testing Next.js in isolation before integrating it into a larger repository:

code

```
mkdir -p ~/projects/nextjs-starter
cd ~/projects/nextjs-starter
git init
```

TIP

Keep a small `README.md` in your starter folder recording the exact version and flags you used so future projects can copy a known-good baseline.

3. Configure strict defaults early. Create your baseline configuration file and commit it before adding optional plugins or third-party dependencies:

code

```
{
  "resource": "nextjs",
  "type": "framework",
  "strict": true,
  "verified": "2026-10-28"
}
```

4. Run a smoke check. Execute the minimal build, query, or verification step described in [Next.js App Router Documentation](#) and confirm zero warnings in your terminal output.

NOTE

I use Next.js when an application mixes authenticated dashboards with server-rendered routes in a single TypeScript codebase. Skip it for simple static docs where Astro is lighter.

Common mistakes

COMMON MISTAKE

Copy-pasting unpinned snippets from older tutorials. Always check the version selector in [Next.js App Router Documentation](#) first. Major releases frequently simplify configuration and deprecate legacy flags.

WARNING

Avoid installing five companion libraries or extensions on day one. Run Next.js with its built-in defaults for a full day before adding abstractions.

Next steps

- Bookmark [Next.js App Router Documentation](#) for daily API lookups.
- Return to the [Next.js resource page](#) to watch the curated explainers or explore paired tools.
